

Rubric for Node.js Backend Exceeds Expectations (10-8

	marks) Meets Expectations (7-5 marks) Needs Improvement (4-2 marks) Unsatisfactory (1-0 marks) Marks			
Project Structure Project follows the specified structure perfectly with additional useful	organization. All CRUD operations for Project follows the specified structure correctly.	CRUD operations for Project follows the structure with minor deviations.	CRUD operations for Project structure is incorrect or	confusing. /10 CRUD operations for
Accommodation Management: CRUD Operations accommodations are fully	functional and efficient with proper validation. accommodations are functional with JWT.	with basic validation. accommodations have noticeable issues or lack	validation. accommodations are non	functional or poorly implemented. /10
User Authentication User authentication is secure, fully functional, and properly validated with	All CRUD operations for User authentication is functional with JWT but has minor issues or lacks some validation.	CRUD operations for reservations User authentication has noticeable issues or lacks proper validation.	CRUD operations for reservations User authentication is non functional or	insecure. /10 CRUD operations for reservations
Reservation Management: CRUD Operations reservations are fully functional and efficient with proper	validation. are functional with basic	validation. have noticeable issues or lack	validation. are non-functional or poorly	implemented. /10
Middleware Implementation authentication is robust, secure, and reusable.	Comprehensive and informative Middleware for authentication is functional but could be improved.	Sufficient error handling with Middleware for authentication has noticeable issues.	Basic error handling present but Middleware for authentication is non-functional or insecure. /10	
Error Handling and Status Codes	error handling with appropriate status codes throughout the application.	Functional integration with MongoDB using Mongoose with appropriate schemas.	Basic integration with MongoDB using Mongoose but with some inefficiencies or issues.	Poor integration with MongoDB or incorrect use of Mongoose. /10
Database Integration with Mongoose	Efficient and optimized integration with proper schemas and relationships. Comprehensive API correct status codes in most cases.	Sufficient API documentation and lacks in some areas or uses incorrect status codes.	Basic documentation and Error handling is missing or incorrect, leading to confusion. /10	no documentation and
API Documentation and Comments documentation and well commented code throughout the project.	Adheres to security best practices comments in the code.	Follows basic security practices comments present but lacking in	detail. Basic security present but with	comments, making the code hard to understand. /10
Security Best Practices	and Clean Code		load times.	Basic modularity present but with vulnerabilities. /10
Performance and Efficiency	with no vulnerabilities, including JWT and data validation. Optimized performance with minimal load times and efficient resource management.	Highly modular and clean code with minimal vulnerabilities.	Modular and clean code with some vulnerabilities. Performance present but with noticeable delays or inefficiencies.	Poor performance with significant delays or inefficiencies. /10
Structure with reusable components and clear separation of concerns.	Good performance with acceptable reusability. Limited testing and validation	significant issues or lack of modularity.	No testing or validation, leading	to /10
Testing and Validation Overall	Functionality and validation for all endpoints and functionalities.	All functionalities work seamlessly most endpoints and functionalities. Most functionalities work together	present but lacking in some areas. Some functionalities have	potential issues. /10 Significant integration issues or

Integration	together with smooth integration process with environment between components.	Basic deployment process with	Deployment process present but together.
Deployment and Environment	Well-documented deployment with minor integration issues.	noticeable integration issues or lack cohesion.	lacking in detail or missing functionalities not working
			Poor or no deployment process, /10

Configuration

Overall Presentation and Polish

configurations for different stages (dev, prod).
Highly polished and professional presentation with attention to detail.
some environment configurations.

Good presentation with minor details attended to.

configurations.

Basic presentation present but lacking in polish.

leading to potential issues. /10

Poor presentation with major issues or lacking detail. /10
